EDUCATION

University of Texas at Austin – Austin, TX

May 2029

Bachelor of Science in Computer Science

Coursework: Data Structures and Algorithms, Linear Algebra, Probability and Statistics, Multivariate Calculus, Differential and Integral Calculus, Discrete Math, Differential, Computer Organization and Architecture

EXPERIENCE

Getfertilizerwiser, St. Edward's University – Austin, TX

2026 - Current

Fullstack Developer

- **Developed** a TypeScript-heavy web application (getfertilizerwiser) with modular, strongly typed front-end logic, improving code safety, maintainability, and refactorability.
- **Implemented responsive UI components** and styling using CSS and JavaScript, ensuring consistent behavior and user experience across devices and browsers.
- **Utilized GitHub for source control and collaboration**, including feature branching, code reviews, and issue tracking, to manage the project lifecycle from initial prototype through iterative enhancements.

Austin Spanish First – Austin, TX

2020 - Current

Co-Director

- **Direct a 10+ member technical team**, delegating tasks and coordinating efforts to deliver seamless audio/visual experiences for 400+ weekly attendees.
- **Lead the redesign and optimization** of audio/streaming infrastructure, improving broadcast quality and increasing online viewership by 50%.

PROJECTS

Kalshi Arbitrage Bot | Python, REST

- **Built a Python-based arbitrage engine** that integrates with the Kalshi API to scan prediction markets, validate contract data, and algorithmically detect risk-free “bundle long” and “bundle short” opportunities across mutually exclusive outcomes.
- **Designed a modular architecture** with dedicated components for market analysis, opportunity batching, trade execution with risk checks, and an interactive Rich/Questionary-powered CLI for discovering, inspecting, and executing arbitrage strategies in real time.

Fake-or-Not | Python, FastAPI, React

- **Built an end-to-end fake-news classification pipeline** using Jupyter notebooks for data exploration and feature engineering with data libraries, and exported the trained model as an ONNX artifact for portable inference.
- **Implemented a production-ready model** serving backend exposing a REST API for real-time predictions, including request validation, model versioning, and batch prediction endpoints to support both online and offline workflows.
- **Developed a responsive single-page frontend** in React (Vite) with fetch-based integration to the REST /predict endpoint, styled with modern CSS and maintained with ESLint for code quality.

Kwii Programming Language | Java

- **Designed and implemented an interpreted programming language** from scratch, inspired by Crafting Interpreters and using a recursive descent parser, abstract syntax tree evaluator, and runtime environment supporting variables, control flow, and functions.
- **Applied compiler theory concepts** (lexical analysis, parsing, runtime environments) to create a modular and extensible interpreter.

ADDITIONAL

- **Technical Skills:** Java, Python, JavaScript, FastAPI, React, Expo, Supabase, Express, NEAT, SQL
- **Work Eligibility:** Eligible to work in the U.S. with no restrictions
